

AcutVista

Cámara a Color Fija CCTV NFC-1121SN.

(No. de Fábrica: 1121SN)

Beacon software, a simple and powerful tool, aiming for SOHO market and used for local and remote observation and surveillance, provides users the capability to perform visual access to any object in visible range in the target locations through Internet or local network by punching IP on web browser or the software.

This software can do control and monitor to 4 speed domes and cameras. It allows every PT speed dome in the system for 8 view presets for fast and accurate target allocating. The Beacon has many useful and valuable features, such as supporting fixed, dynamic and virtual IP, do interactive setup and control to speed domes with hardware console (AcutVista KP-104), show camera titles and preset names on display ... some of the features are not even seen in many sophisticated and expensive "high-end" DVR software.

This outstanding software is composed of three parts:

- Console
- Remote viewer (client user)
- IE viewer

All of these three are accessible only if user possesses correct user's name and password. The system administrator (root user) has the authorization, which is available to console only, to add, delete or change the user name and password at his / her decision.
